Hi Mari-Anne,

You may also wish to contact Institutional Research. Sometimes they store data in other programs. It may be easy for them to get a double major count by year.

The listing of the double majors is not important. The requirements are the same. For example, if you see the listing Business Administration Accounting and Accounting Business Administration, the majors are listed in order of declaration but the requirements are the same. We don't have any records of double majors that were denied. My guess is that no more than 5-7 during the last couple years but usually those were appealed and approved.

There is overlap with the following majors:

- Business Administration, Economics and Accounting (SEBA changed their major requirements in 2013 so most of the overlap now exist with lower division courses)

- Math Physics or any science with math

Here is the data I have:
